USSR/Physics - Absorption spectrum

FD-3053

Card 1/2 Pub. 153 - 22/23

Author : Gross, Ye. F.; Yakobson, M. A.

Title : Brief communication. Linear absorption spectrum in cadmium sulfide crystal at the temperature of liquid helium

Periodical : Zhur. tekhn. fiz., 25, February 1955, 364

Abstract : The senior writer observed (DAN SSSR, 84, 471, 1952) in the absorption spectrum of CdS crystal at $T=77.3^{\circ}\text{K}$, the temperature of liquid nitrogen, a sharp line and wider band situated around the long-wavelength edge of the ground light absorption of CdS crystal lattice, and in further development of this investigation of exciton absorption in Cu_2O crystal (DAN SSSR, 90, 745, 1953; DAN SSSR, 92, 265, 1953 and 99, 231, 1954) undertook new experiments with CdS crystal at $T=4.2^{\circ}\text{K}$, the temperature of liquid helium, in the course of which experiments it was clarified that the long-wavelength edge of ground absorption of CdS crystal possesses just as does Cu_2O crystal a very complex structure (at $T=4.2^{\circ}\text{K}$ the senior author and his co-workers observed in the spectrum of CdS

Card 2/2

FD-3053

Abstract : crystal around edge of ground absorption 11 sharp absorption lines and 4 wider bands indicating fine structure). The present brief communication gives a table of the frequencies of these lines and also the frequencies of the edges of the observed bands. The writers note that the structure of the absorption edge depends upon the polarization status of the absorbed light and that the complex structure of the absorption spectrum of CdS points to the large number of electron levels in the forbidden zone of CdS crystal. Just as in the case of Cu_2O the writers associate the structure of the edge of the ground absorption of CdS with the excitation of excitons in the crystal lattice of CdS. They thank N. M. Reynov, head of the cryogenics laboratory of the Leningrad Physical Technical Institute. Co-authors of the senior writer in the mentioned earlier works are N. A. Karryev, B. P. Zakharcheniya, and N. M. Reynov.

Title : A complex structure of the end of the basic absorption of greenockite crystals

Periodical : Dok. AN SSSR 102/3, 485 - 488, May 21, 1955

Abstract : New experimental studies of the absorption spectrum of greenockite crystals (CdS) are described. The studies revealed a complexity in the long-wave absorption spectrum of the CdS crystals which indicates the presence of a number of discrete energy levels in the crystals. Title : Radiation spectrum of the Exciton.

Orig Pub : Zh. tekhn. fiziki, 1956, 26, No 6, 1269-1371

Abstract : An investigation was made of the azure luminescence of a CdS crystal at 77.3° K. When the excitation is produced by the 3663A mercury line or by the continuous spectrum of an incandescent lamp in the blue region of the spectrum, one observes the following lines and radiation bands (the numbers in the parentheses indicate the boundaries of the bands): (4805, 4813), (4838, 4858), 4870, 4875, 4880, 4886, 4925, 5009. The radiation line 4870 A coincides with the exciton absorption line at 77.3° K and is polarized the same as the latter. The 4870 A line and the 4858 -- 4838 and 4813 -- 4805 A bands are the strongest in the

absorption spectrum of the exciton in CdS at 77.3° K and are therefore attributed to excitons. All the most intense radiation lines in the radiation spectrum reduced to 4.3° K are observed also in the absorption of CdS. It is concluded that the line radiation spectrum of the blue luminescence is a radiation spectrum of excitons upon their annihilation in the CdS lattice.

AUTHOR: GROSS, YE.F., RAZBIRIN, B.S., YAKOBSON, M.A. PA - 3573
TITLE: Line Spectra of Fundamental Absorption Edge of the CdS Crystals.
(Lineychatyy spektr kraya osnovnogo pogloshcheniya kristallov sernistogo kadmiya, Russian)
PERIODICAL: Zhurnal Tekhn. Fiz. 1957, Vol 27, Nr 5, pp 1149-1151 (U.S.S.R.)

ABSTRACT: The present paper gives a detailed description of the observations made at $T = 4.2^{\circ}$ K. At this temperature the lines mentioned were particularly distinct. The monocrystals of CdS investigated were obtained in different manners:

- 1.) According to FRERICH'S method (Phys.Rev. 72, 594, 1957).
- 2.) By sublimation of pure CdS powder in a H_2S - and H_2 - atmosphere.

In the case of all monocrystals investigated the optical axis O was in a plane of the crystal and was directioned according to the groove on the surface. It was found that a group of thin and weak lines on the edge of the real absorption domain, $\lambda \lambda 4889-4860 \text{ \AA}$, undergoes considerable changes with respect to intensity and breadth and number of lines on the occasion of transition from one crystal to another. The number of absorption lines differs according to the different crystals. In most samples their spectra were observed also in polarized light. Some of the thin lines at

Card 1/2

PA - 3573

Line Spectra of Fundamental Absorption of the CdS Crystals.

the edge of the absorption were highly polarized. The thin lines with long waves in the domain of $\lambda \lambda$ 4889-4865 Å are fully polarized. Those strips which are located on the short-wave side of the variable thin lines do not change their position considerably and seem to be stable. It turned out that not only the various crystals can differ from one another with respect to the spectrum, but that also various parts of one and the same crystal have different spectra. The great variability of the narrow lines on the edge of the absorption must still be interpreted and explained. (With 1 Table, 3 Illustrations, and 1 Slavic Reference).

of Sciences.

PURPOSE: This book is intended for scientists in the field of semi-
conductor physics, solid state spectroscopy, and semiconductor
devices. The collection will be useful to advanced students in
universities and institutes of higher technical training
specializing in the physics and technical application of semi-
conductors.

COVERAGE: This collection contains reports and information bulletins
(the latter are indicated by asterisks) read at the first All-
Union Conference on Optical and Photoelectric Phenomena in Semi-
conductors. A wide scope of problems in semiconductor physics
and technology are considered; photoconductive cells and
photoresistors; optical properties; photoconductive cells and
photoresistors; the actions of hard and soft x-ray radiations,
etc. The materials were prepared for publication by Z. I.
Rashboy, O. V. Smitko, A. B. Poluyev, A. F. Lubchenko, and M. K.
Sheynman. References are given. Illustrations follow each article.

AUTHORS: Gross, Ye. F., Yakobson, M. A.TITLE: Luminescence of CdS crystals at the fundamental absorption edge
(Theses)PERIODICAL: Referativnyy zhurnal, Fizika, no. 5, 1962, 32-33, abstract 5V224
(V sb. "Fotoelektr. i optich. yavleniya v poluprovodnikakh",
Kiyev, AN USSR, 1959, 63-65)

TEXT: A large group of narrow lines and broad bands of various intensities is observed in the region 4850-4880 Å, near the edge of CdS crystal fundamental absorption. A comparison of crystal luminescence spectrum at 4.3°K with absorption spectrum has shown that almost all absorption lines are observed in emission, i.e., luminescence is of a resonance nature. Line 4870Å and bands 4858-4838 and 4813-4805 Å, observed at 77.3 K in the luminescence spectrum are interpreted as the spectrum of exciton emission following their annihilation in the lattice. In various crystals of CdS, a difference in luminescent spectra is observed, corresponding to narrow absorption lines, which is due, in the authors' opinion, to impurity and surface levels in the crystal.

AUTHORS: Gross, Ye. F. and Yakobson, M. A.

TITLE: Investigation of the luminescence of CdS single crystals at low temperatures

PERIODICAL: Izvestiya Akademii nauk SSSR. Seriya fizicheskaya, v. 25, no. 4, 1961, 531-532

TEXT: The present paper was read at the 9th Conference on Luminescence (crystal phosphors). The authors have continued their investigation of the luminescence of CdS single crystals. The short wave line group which corresponds to the short wave absorption of the CdS single crystal at $T = 4.2^{\circ}\text{K}$ has been studied. The luminescence spectrograph obtained showed that the short wave bands ($\lambda = 4788, 4828$ and 4852 \AA) are weak due to reabsorption. If these short wave bands are considered to be principal bands then it is possible to contrast them with satellites at a distance of 300 cm^{-1} . But these are not contained in the oscillation series of the long wave luminescence. The effect of treating CdS single crystals with sulfur and cadmium vapors on their spectra has also been investigated. The

Card 1/3

Investigation of the...

22186
S/048/61/025/004/035/048
B117/B212

purpose of these tests has been to clear the nature of defects which are responsible for the origin of the long wave line group of the light-blue luminescence. It has been found that after the treatment with sulfur vapors long wave luminescence and absorption will disappear completely. After using cadmium vapor these spectra will essentially stay the same. The test results allowed the following conclusions: The short wave luminescence lines and the corresponding absorption bands can be considered an annihilation of the exciton in the crystal lattice during light emission. The origin of long-wave light-blue luminescence can be referred to the presence of defects in the crystal lattice. And it may be assumed that the junctions responsible for the origin of long wave emission will take place in the lattice near various defects. Furthermore, it is assumed that the long-wave line groups in the absorption spectrum and in the spectrum of light-blue luminescence of the CdS crystal are connected with the excitation and emission of ortho-excitons. They are formed by light excitations under the influence of the disturbing effect of defects. Therefore, the short-wave line group should be compared with para-excitons. S. A. Moskalenko has stated the following in a discussion about this paper: In order to explain the CdS spectra the authors have used the

Card 2/3

22186

Investigation of the...

S/048/61/025/004/035/048
B117/B212

hypothesis of ortho and para excitons. According to their opinion ortho excitons are allowed because of the interaction with impurities. A separation of ortho and para excitons depends on the exchange interaction. If this is very small then it points to a large-enough radius of the excitons; the spin-orbit coupling at the impurity potential is small and the ortho excitons are not intensive. TITLE: ^{2, 4, 4, 5-5} Effect of temperature on emission from single crystals of CdS

SOURCE: Optika i spektroskopiya, v. 20, no. 1, 1966, 78-85

TOPIC TAGS: single crystal, cadmium sulfide, luminescence spectrum, spectrography

ABSTRACT: The author studies the temperature relationship of phonon series isolated in the luminescence spectrum of cadmium sulfide single crystals. Temperature effects were studied in the 4.2-90°K region. Crystals 5-10 μ thick were grown from the gaseous phase. A carbon resistor thermometer was used for temperature measurements. Luminescence of the specimen was excited by the 365 mμ line isolated by a filter from the light of a mercury lamp. The image of the specimen was focused on the input slot of a spectrograph and the output was photoelectrically amplified and potentiometrically recorded. Curves are given for relative intensity as a function of temperature. The data further confirm the hypothesis of exciton complexes in

CdS. Intensity distribution in lines of equidistant series for "blue" and "green" luminescence at 4.2 and 77°K showed that the ratios of intensities between the members of the different series were identical for both temperatures. The experimental distributions of intensities between members of the "blue" and "green" series were compared with the intensity distributions computed by the Pekar-Krivoglaz formula:

$$\frac{I_n}{I_0} = \frac{P^n}{n!}$$

where I_0 is the intensity of the phonon-free line; I_n is the intensity of the n -th line of the series; P represents Stokes losses. The results show good agreement for "green" luminescence and considerable divergence for "blue" luminescence. The greatest difference between theory and experiment is observed in series with low Stokes losses. This phenomenon is explained by the approximations made in derivation of the formula. In conclusion the author is grateful to Ye. F. Gross for interest in the work and valuable consultation, to Ye. D. Trifonov for useful remarks during discussion of the article and also to graduate students at Leningrad State University S. V. Bushin and S. Dzhioyeva for assistance with the measurements.

PURPOSE: This pamphlet is intended for tool designers and machine-
tool operators.

Card 1/3

Surface Quality of Cutting Tools (Cont.)

571

COVERAGE: The quality of the cutting tool surface is the most important criterion of its durability. This quality is determined by two sets of indices. The first set comprises characteristics related to the extent of surface irregularities and their distribution; the second set of indices is based on the physical and mechanical properties of the tool's surface layers. There are 7 Soviet references. No personalities are mentioned.

Akademiya nauk SSSR. Institut mashinovedeniya

Osobyye voprosy tochnosti, vsioznamenysti i tekhnicheskikh izmeneniy v mashinostroyeni (Basic Problems of Accuracy, Interchangeability and Engineering Measurements in Machine Building) Moscow, Mashgis, 1958. 411 p. 4,500 copies Printed.

Ed. I. A. M. Gavrillov, Doctor of Technical Sciences, Professor; Tech. Ed. I. I. Medel, Managing Ed. for Literature on Metal Working and Tool Making (Mashgis); R. B. Boyzel'man, Engineer.

PURPOSE: This collection of articles is intended for engineering and scientific workers and for teachers and students of machine and instrument building courses.

COVERAGE: This collection of articles presents the works of a conference on basic problems of accuracy, interchangeability and engineering measurements, convened in March 1956 by the Machine Building Technology Commission of IMASH AN SSSR (Institute of Machine Construction of the Academy of Sciences, USSR), the State Committee for Modern Technology, the Committee for Standard Weights and Measuring Instruments under the Council of Ministers, USSR, the Ministries for Machine Building and the Ministry of Higher Education of the USSR. In the articles dealing with accuracy of fabrication, problems of the theory and practice of calculating accuracy of standard processes and standard products are discussed. In the articles on interchangeability and engineering measurements an evaluation of the state of this field is presented along with the theoretical and practical engineering outlook for the future, discussed. No personalities are mentioned. There are 110 references of which 121 are Russian, 10 German, 8 English, 1 French.

Sovremennyye metody obrabotki tsilindricheskikh zubchatykh koles
(Modern Methods of Machining Spur Gears) Moscow, Trudrezervizdat,
1958. 91 p. 10,000 copies printed. (Series: Novaya tekhnika i
peredovyye metody truda).

Scientific Ed.: S.A. Chikhachev; Ed.: I.Ya. Moskvina; Tech. Ed.:
Yu.N. Gorokhov.

PURPOSE: This book is written for teachers and instructors in
labor reserve schools, and also for engineering personnel in
the machine-building industry.

COVERAGE: The book contains a description of modern equipment used
in the Soviet Union and in non-Soviet countries for manufacturing
spur gears. It also deals with automatic production of gears,
introduced for the first time in the USSR. The author describes
materials, methods of heat treatment, and the manufacture of spur gears.
No personalities are mentioned. There are no references.

Yedinaya sistema planovo-predupreditel'nogo remonta i ekspluatatsii tekhnolo-
gicheskogo oborudovaniya mashinostroitel'nykh predpriyatiy; tipovoye
polozheniye (Unified System of Planned Preventive Repair and Operation
of Equipment in Machinery-Manufacturing Plants; Determination of Standards)
3rd ed. Moscow, Mashgiz, 1958. 539 p. Errata slip inserted. 25,000 copies
printed.

Ed.: M. O. Yakobson, Doctor of Technical Sciences, Professor; Tech. Ed.:
B. I. Model'; Managing Ed. for literature on the Economics and Organization
of Production: T. D. Saksaganskly.

PURPOSE: This book is intended for factory repair-shop workers and other
engineering personnel.

COVERAGE: The book contains the fundamental conditions relating to repair
organizations, characteristics of repair systems (length of repair cycles
and interrepair periods, category of repairing difficulty, etc.), and output
norms of fundamental and auxiliary materials. The unified system embraces

Card 1/25

Unified System of Planned Preventive Repair (Cont.)

SOV/2175

the repair of metal-cutting and wood-milling machines and press forging, foundry, craning and electrical engineering equipment. The book was prepared under the direction of A. P. Vladziyevskiy, Doctor of Technical Sciences, assisted by engineers D. S. Vaks and V. G. Vasina. There are 275 tables and 23 references: 21 Soviet and 2 English.

TABLE OF CONTENTS:

Foreword to the First Edition	4
Foreword to the Second Edition	7
Foreword to the Third Edition	9
Introduction	11
I. ORGANIZATION OF THE OPERATION AND THE PLANNED PREVENTIVE MAINTENANCE AND REPAIR OF EQUIPMENT	
1. Fundamental Conditions for a System of Planned Preventive Maintenance and Repair	15
Definition of the concept "a system of planned preventive maintenance"

PHASE I BOOK EXPLOITATION

SOV/4032

Yakobson, Mikhail Osipovich, Doctor of Technical Sciences, Professor

Tekhnologiya stankostroyeniya (Technology of Machine-Tool Manufacture) Moscow, Mashgiz, 1960. 547 p. Errata slip inserted. 8,500 copies printed.

Reviewer: V.A. Anufriyev, Engineer; Ed.: L.T. Shtern, Engineer; Tech. Ed.: B.I. Model'; Managing Ed. for Literature on Metalworking and Machine-Tool Manufacture (Mashgiz): V.V. Rzhavinskiy, Engineer.

PURPOSE: The book is intended for technical personnel of machine and machine-tool establishments and scientific research organizations.

COVERAGE: The book is a summary of machine-tool-manufacturing practices in the USSR and other countries. Advanced methods of making basic parts of machine tools are discussed, including erection and painting processes. Attention is given to problems of full mechanization and automation of machine-tool-manufacturing processes. K.A. Il'iná, Engineer, assisted in the writing of Chapter III. There are 49 references: 45 Soviet, 2 French, 1 English, and 1 German.

PHASE I BOOK EXPLOITATION SOV/5291

Soveshechniye po kompleksnoy mekhanizatsii i avtomatizatsii tekhnologicheskikh protsessov v mashinostroyenii. 2d, Moscow, 1956

Avtomatizatsiya mashinostroyitel'nykh protsessov. t. III: Obrabotka rezaniyem i obshcheye voprosy avtomatizatsii (Automation of Machine-Building Processes. V. 3: Cutting and General Automation Problems) Moscow, Izd-vo AN SSSR, 1960. 296 p. (Series: Its: Trudy, t. 3) 4,700 copies printed.

Sponsoring Agency: Nauchniya nauk SSSR. Institut mashinovedeniya. Komissiya po tekhnologii mashinostroyeniya.

Resp. Ed.: V. I. Dikushin, Academician; Ed. of Publishing House: V. A. Kotoy; Tech. Ed.: I. P. Kuz'min.

PURPOSE: This collection of articles is intended for technical personnel concerned with the automation of the machine industry.

COVERAGE: This is Volume III of the transactions of the Second Conference on the Full Mechanization and Automation of Manufacturing Processes in the Machine Industry, held September 25-29, 1956. The transactions have been published in three volumes. Volume I deals with the hot pressworking of metals, and volume II, with the actuation and control of machines. The present volume deals with the automation of metal machining and work-hardening, and with general problems encountered in machining. The transactions on the automation of metal machining processes were published under the supervision of P. S. Deyanok and A. M. Karatygin, and those on the automation of work-hardening processes, under the supervision of E. A. Satei, and M. O. Yakobson. No personalities are mentioned. There are no references.
